Summary

Developer who solves real problems and ships things that actually work from backend APIs and databases to frontend interfaces and data pipelines. Proficient in Python, JavaScript, and TypeScript with hands-on experience building and deploying full-stack web applications. Familiar with cloud fundamentals and AWS services.

Experience

Intern

Dec 2025 – Mar 2026

HAEGL Technologies Pvt Ltd

Hubballi, India

- **Worked on the text preprocessing module** built a cleaning pipeline to handle tokenization, lemmatization, and noise removal for 200K+ news articles that fed into the team's classification system
- Experimented with different feature extraction techniques like TF-IDF and Word2Vec, **benchmarked their impact on model accuracy**, and shared findings with the team to help finalize the feature strategy
- Studied the raw dataset to identify overlapping and redundant category labels, and **proposed a consolidation mapping from 42 to 12 categories** that the team later adopted
- Wrote evaluation scripts to generate **confusion matrices and classification reports**, helping the team compare model performance across different approaches

Technical Skills

Programming Languages: Python, JavaScript, TypeScript
Libraries / Frameworks: React.js, Next.js, Node.js, Tailwind CSS
Database: SQL, SQLite
Cloud & DevOps Tools: AWS, Docker, Git, GitHub, Vercel, Streamlit
Operating Systems: Windows, Linux

Education

RV College of Engineering

Bengaluru, India

Masters of Computer Applications

Nov 2025

Projects

Job Application Tracker

- **Built a full-stack web app from scratch** that solves the problem of **tracking job applications** users can **add, edit, delete, and filter** applications across **5 hiring stages** (Applied → Online Test → Interview → Offer → Rejected) replacing spreadsheets with a **structured dashboard**.
- **Designed and implemented a REST API layer** with **6 endpoints** for authentication and job **CRUD operations**, structuring **API routes in Next.js**, handling **request validation**, and connecting **serverless functions** to **MongoDB Atlas**.
- **Implemented secure authentication end-to-end** with **signup and login flows** using **bcryptjs** password hashing, **server-side validation**, and basic **session handling**.
- **Built an analytics dashboard** with **real-time charts** (bar, donut chart, **stats cards**), aggregating **MongoDB data** and transforming it into **meaningful insights** using **Recharts**.

CampusVote E-Voting System

- Built an **end-to-end voting flow** where students enter their email, select a candidate, cast their vote, and view **live results with interactive charts** all in a single web app
- Implemented **one-vote-per-person enforcement** at 3 levels input validation, database constraint, and a **transaction-level check** for simultaneous voting edge cases
- Stored a **pre-computed vote count** per candidate so results load instantly instead of recounting on each refresh maintained consistency using a **single atomic database write**
- Built a **live results dashboard** with **bar charts, pie charts, and ranked progress bars** showing vote count, percentage share, and position updates automatically after every vote

Achievements & Certifications

- SQL Certification - HackerRank
- Software Engineering Certification - HackerRank
- Research paper on *Cybersecurity in E-Governance* accepted for publication in the **International Journal of Computer Applications (IJCA)**, September 2025.
